Utkarsh Roy - SmartStay

Room Vacancy Status

- The pie chart displays the room vacancy status.
- The majority of rooms are vacant.
- A smaller portion of rooms are booked.
- The number of vacant rooms is significantly higher than the number of booked rooms.
- The data suggests high vacancy rate.

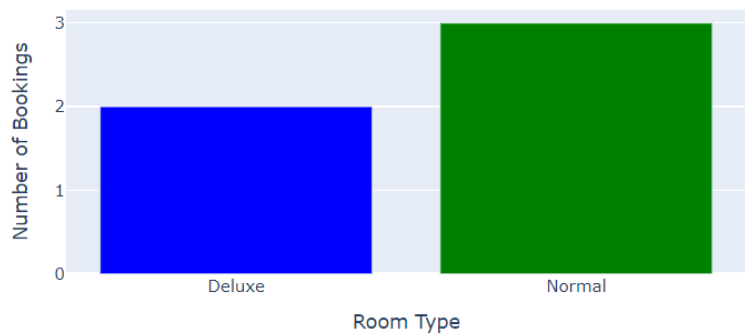

Room Vacancy Status

Bookings By Room Type

- The plot shows the number of bookings for different room types.
- There are two room types, Deluxe and Normal.
- The number of bookings for Normal rooms is higher than Deluxe rooms.
- The plot is a bar chart.

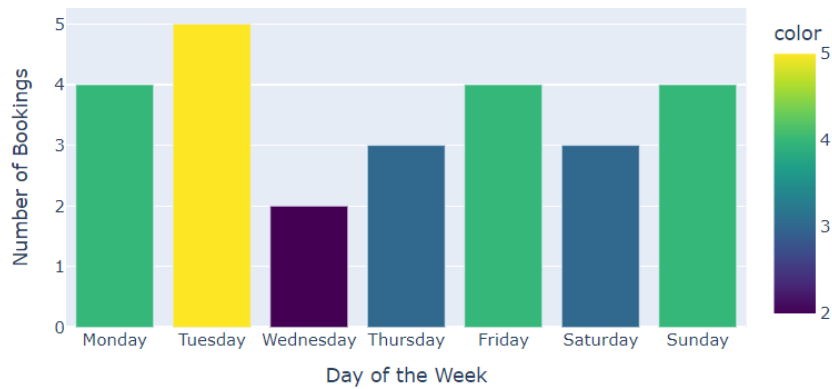

Current Bookings by Room Type

Booking Trends By Days Of Week

- Tuesday has the highest number of bookings.
- Monday and Friday have the second highest number of bookings.
- Sunday has the third highest number of bookings.
- Wednesday and Saturday have the least number of bookings.
- The yellow color represents the highest number of bookings, while the darker shades of blue and purple represent lower numbers of bookings.

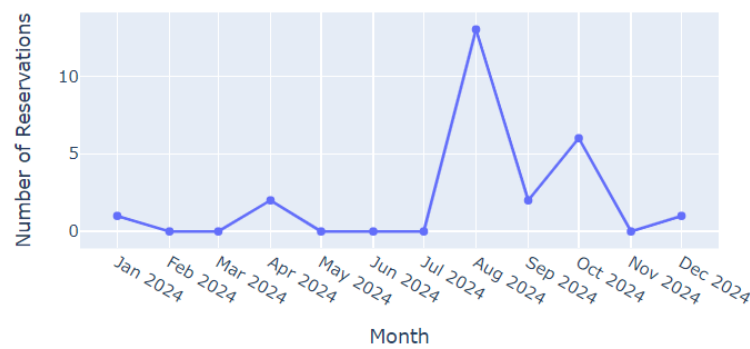

Booking Trends by Day of Week

Reservation Trends This Year

- Reservations started the year low in January and February, then increased slightly in April before dropping again in May.
- Reservations remained at a low level in June but skyrocketed in July.
- After the peak in August, reservations dropped significantly in September.
- There was a small uptick in October, but the number of reservations decreased again in November and December.
- The overall trend indicates a seasonal pattern, with higher reservations during the summer months.

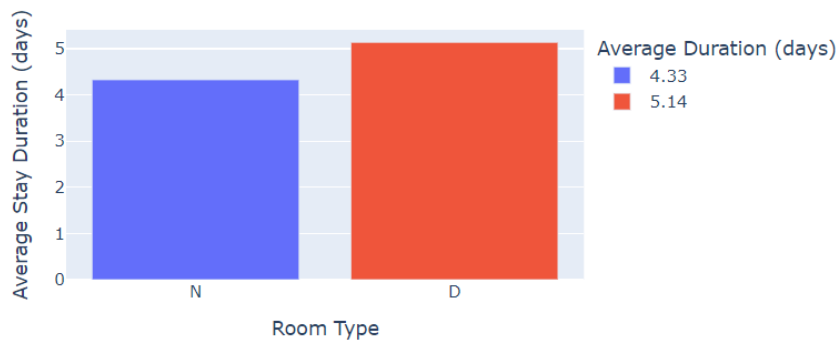

Reservation Trends This Year

Average Stay Duration By Room Type

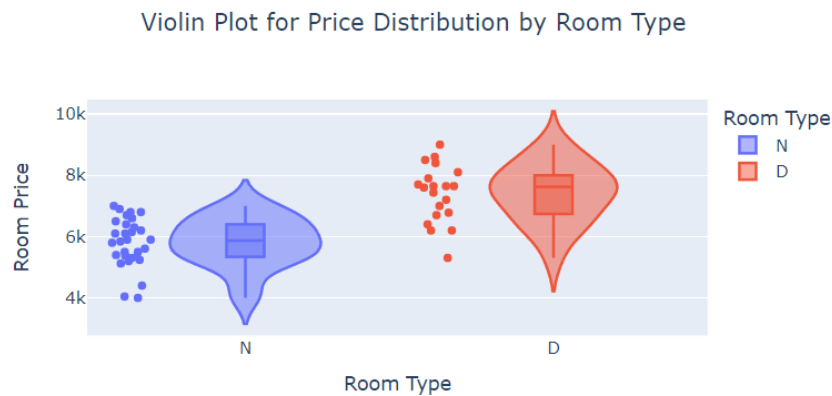

The plot shows the average stay duration by room type. The average stay duration for "N" is 4.33 days, while the average stay duration for "D" is 5.14 days. The bar for "D" is taller than the bar for "N", indicating that "D" has a longer average stay duration than "N". The plot also shows the average stay duration for each room type.

Average Stay Duration by Room Type

Violin Plot for Price Distribution By Room Type

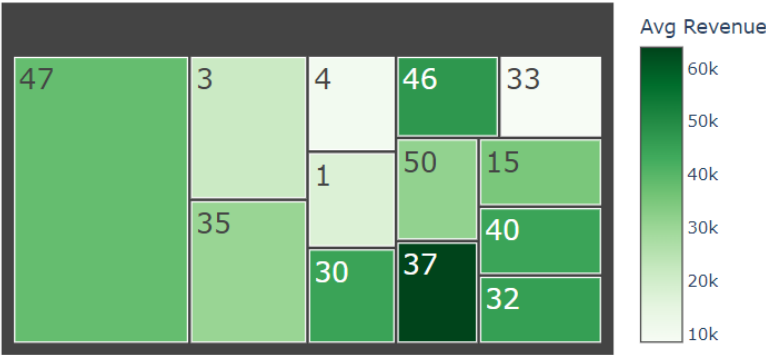

- The plot is a violin plot that shows the distribution of prices for two different room types.
- The room types are labelled 'N' and 'D' on the x-axis.
- The y-axis represents the room price.
- The plot shows that the prices for room type 'D' are higher than the prices for room type 'N'.
- There are also individual data points plotted on top of the violins which represent the actual prices of each room.

Room Utlization Treemap

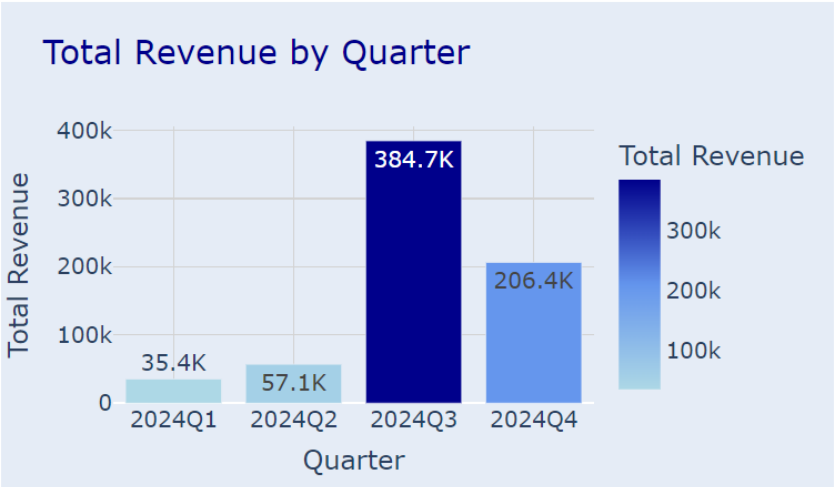

- Room numbers with high utilization (dark green shades): 37
- Room numbers with average utilization (medium green shades): 47, 3, 35, 30, 46, 50, 40, 32
- Room numbers with low utilization (light green or white shade): 4, 1, 15, 33. Dark green indicates high utilization.

Room Utilization Treemap

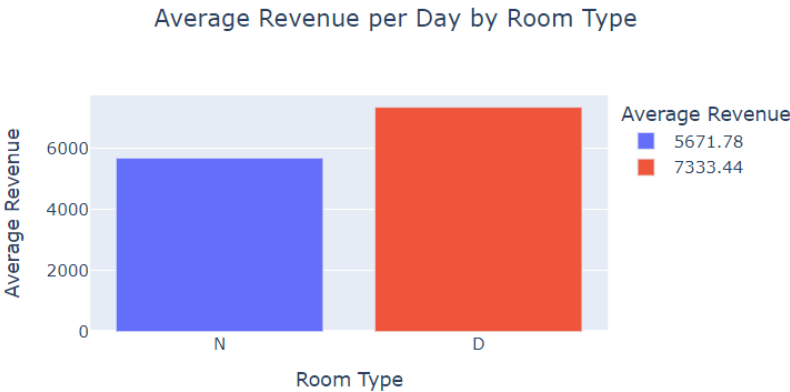

Revenue By Quarter

The revenue for quarter 1 of 2024 was 35.4k. In the second quarter, the revenue was 57.1k. The third quarter brought in 384.7k. Finally, the fourth quarter of 2024 had revenue of 206.4k. The revenue showed a strong upward trend throughout 2024, with the third quarter being the most profitable. Revenue declined slightly in the final quarter.

Average Revenue per Day By Room Type

- The plot shows the average revenue generated per day by different room types.
- The average revenue generated by room type N is \$5671.78 per day.
- The average revenue generated by room type D is \$7333.44 per day.
- Room type D has a higher average revenue per day than room type N.
- The plot is a bar chart with two bars representing the two room types. The height of each bar represents the average revenue generated by that room type.

Room Price Distribution

- 4000-5000: 3 rooms - 5000-6000: 15 rooms - 6000-7000: 20 rooms - 7000-8000: 8 rooms - 8000-9000: 5 rooms - 10000+: 0 rooms The majority of rooms are in the price range of 6000-7000 followed by 5000-6000. The least number of rooms are in the price range of 10000+ and 8000-9000. The number of rooms in each price range are not evenly distributed.

Distribution of Rooms Across Different Price Ranges
